Original edition in Portuguese.

(1)

Preface

The real aim of publishing this book is the lack of information about the corona virus, which is contagious and deadly.

The lack of truthful information has caused thousands of people to become infected and once the virus has contracted, it has a period of seven to fourteen days to incubate within the human being, taking the infected person to the hospital because of the symptoms.

That are:

Fever.

Constant cough.

Pains in the arteries.

Shortness of breath in the lungs.

Muscle weakness.

Fatigue.

Physical tiredness.

Lack of appetite.

(2)

I didn't taste the food.

And mental weakness.

The dread.

The fear.

Anguish

Depression.

Solitude

Mental distress.

Feeling of loss.

Note.

Each person who managed to leave the ICU alive reports the symptoms of the disease and the mental dread they had while they were hospitalized.

The medications used in hospitals are:

Antibiotics.

(3)

Anti-inflammatories.

B complex.

And other medicines used to contain pain, fever, cough and physical and mental tiredness.

Few are able to survive even with all the medical attention in the hospital.

The form of contagion led to the pandemic and today this corona virus is multiplying by contact between people.

In many countries, even with large numbers of infected people, the government insists on depriving the people of the quarantine so as not to harm businessmen, suppliers, distributors, industries, trade and tax collection even if they have to sacrifice the people to death. .

The author

(4)

Index

Chapter I

What is corona virus.

Chapter II

How the corona virus spreads among people.

Chapter III

The truth about the corona virus.

Chapter IV

Quarantine.

Chapter V

Who is winning and who is losing with the pandemic.

Chapter VI

Mass unemployment.

(5)

Chapter VII

Because humanitarian aid takes so long for those in need.

Chapter VIII

What to do to get out of this pandemic alive.

CHAPTER I

WHAT IS CORONA VIRUS

Corona is a virus that first appeared in a populous city in China.

Scientists were already studying the presence of a contagious virus, but still had no information on how it would be contagious.

Corona is not a virus generated in molecular engineering laboratories.

This is a wild virus that hosts few animals known to man.

Only through scientific knowledge will it be possible to unveil the truth and know the means to immunize everyone on the planet.

We do not live reminiscing about the past, but history brings a record of facts that if we were prudent we will not be infected by unknown viruses.

(7)

Knowledge is the basis of life.

Without knowledge, nobody does anything and dies prematurely.

The information you have about the deadly and contagious enemy makes you prudent.

It is the question of life and death.

This virus corona has an action and reaction time.

No hospital bed for everyone infected.

Not enough doctors, nurses, psychologists to help the infected.

Health representatives have control over what they say to not cause any disagreement with government officials.

They cannot publicly expose their misinformation.

(8)

It is a power struggle in the face of public calamity.

Whoever is in power wants to continue, even if it costs the lives of thousands of people.

The number of deaths from the corona virus does not appear in government statistics.

In addition to having an invisible enemy that is contagious and deadly, we also have a lack of truth in the information.

But if we pay attention to listening to several different news, you will get a little bit of truth.

Several communications groups are involved with what has been read and commented on.

Because many government officials are immune to the virus.

By the best of medicine at your fingertips.
